Website UX & Design Recommendations

Focus: User Experience | Design Structure | Product Journey | Conversion

1. Homepage Hero Banner

Change:

Replace the current manufacturing video with a professionally designed, attractive hero banner showcasing the brand/products with a clear **Shop Now** CTA.

Why Recommended:

The current video does not immediately communicate the product or shopping experience. The first screen should create brand appeal and encourage users to explore the products.

2. Navigation Structure

Change:

Simplify the navigation similar to modern D2C brands such as Vilvah and Deyga. Avoid a separate **"Shop All"** category and provide direct access to important product categories.

Why Recommended:

Direct navigation reduces clicks and helps users reach the products they are looking for faster.

3. Shopify Recommendation

Change:

Consider rebuilding the e-commerce website on **Shopify**.

Why Recommended:

Since the primary objective is product sales, Shopify can provide a more streamlined e-commerce experience for product management, cart, checkout, offers, recommendations and customer purchasing.

4. Desktop Website Scale

Change:

Reduce the overall size of sections, product cards, typography and spacing on desktop.

Why Recommended:

The current layout feels oversized, requiring more scrolling. A more compact structure allows users to see more products and information within the same screen.

5. Remove Forced Sign-In

Change:

Remove the sign-in requirement when users click **Add to Cart**. Allow users to add products directly and introduce sign-in during checkout or as an optional offer-based prompt.

Why Recommended:

Requiring sign-in before adding to cart creates unnecessary friction at a high-intent stage and can lead to product purchase drop-offs.

6. Product Image Quality

Change:

Standardise product images using clean white-background images along with professional lifestyle/product images. Complete images for products currently missing them.

Why Recommended:

Product imagery strongly influences purchase confidence. Consistent, professional images will also make the catalogue look more premium.

7. Cart Product Recommendations

Change:

Add relevant product suggestions inside the cart, such as **“You May Also Like”** or **“Complete Your Routine.”**

Why Recommended:

Customers who have already added a product have strong purchase intent. Relevant recommendations can encourage additional purchases and increase cart value.

8. Checkout Product Recommendations

Change:

Add a limited section for relevant products during checkout, such as **“Add Before You Checkout.”**

Why Recommended:

This provides an additional cross-selling opportunity without changing the customer's primary checkout journey.

9. Trust-Building Content

Change:

Add verified trust points such as **“1000+ Customers Trust Vedan”**, customer reviews and other genuine brand credentials.

Example image

Why Recommended:

Trust signals reduce hesitation, especially for first-time visitors who are unfamiliar with the brand.

10. Cart & Checkout Price Consistency

Change:

Cross-check the cart and checkout calculations, as the total amount currently appears to vary between the two stages.

Why Recommended:

Unexpected price changes can create confusion and reduce customer trust at the final stage of purchase.

11. Instagram Section

Change:

Combine Instagram posters and reels into one compact social-media section instead of displaying them separately. Smaller cards are sufficient.

Why Recommended:

The purpose of the section is to provide social proof and show brand activity without taking excessive homepage space away from products and shopping CTAs.

12. Cart Experience

Change:

Structure the cart as:

Products → Offer/Cart Value → Recommended Products → Total → Checkout

Why Recommended:

A structured cart can improve purchase confidence while creating opportunities for relevant cross-selling without adding unnecessary friction.

Overall UX Direction

The website should move towards a simple customer journey:

Attract → Discover → Trust → Product → Add to Cart → Relevant Recommendation → Checkout → Purchase

The overall design should feel **clean, premium, product-focused and easy to shop**, with every section supporting the customer's path towards purchase.
